SC-1,000

Scale & Metal Control

SC-1,000 Scale Control & Metal Chelant is a proprietary, non-phosphorus containing water based formulation for control of carbonate scale and metals staining in pools and spas.

Applied as directed, SC-1,000 is compatible with materials of pool and spa construction, and other treatment chemicals applied as recommended. SC-1,000 is especially effective at controlling salt water generator electrode scale formation without contributing ortho-phosphates to the water which inhibit chlorine sanitation and act as nutrients for algae growth.

APPLICATION

Prior to SC-1,000 application, raise the free chlorine level to 6 to 8 ppm, then add SC-1,000 at an initial rate of one (1) quart per 10,000 gallons of water. Application can be made by pouring into the skimmer or around the perimeter of the water, with the circulation pump on. To ensure continued protection against scale formation and metal staining, the following dose should be incorporated into your maintenance routine: calcium hardness less than 300 ppm – six (6) ounces per 10,000 gallons once a month; calcium hardness greater than 300 ppm – add six (6) ounces per 10,000 gallons twice a month.

HANDLING

SC-1,000 is inherently stable with an indefinite shelf life under normal conditions of storage at temperatures less than 120° F. Prevent freezing to avoid container damage and loss of product. Though SC-1,000 is nontoxic and non-hazardous, gloves and appropriate eye protection should be worn when handling and using the product. Review the product MSDS before using.
